

Cyanotype Photogram Kit

Cyanotype is one of the earliest photographic processes from the year 1842, a fun way to create blue prints with sunlight and water

this kit was made by hand by Luminaria SLC, an artist run studio specializing in Heirloom Tintype Portraits & Handmade Museum Quality photographic prints

Luminaria

@luminariaslc www.luminariaslc.com

- 1) pick an object that will block sunlight

- 3) place into sunlight to expose the cyanotype exposure needs UV light to work, 10-15 minutes in the fall, 5 minutes in summer

thanks to Bostick & Sullivan, the best supplier of paper & chemistry for historic photographic processes

- 2) place cyanotype paper onto mat board, green side up

place object on pre coated paper and slide into clear bag use paper clips if necessary

- 4) expose until the yellow paper turns to a steel blue in color, then its ready to develop by washing in running water for 5 miutes

- 5) dry flat
